

Origin Energy

Stakeholder Management from those in the know.

Stakeholder management software developed by people who understand stakeholder management.

Origin Energy faced the same challenge that is faced at the start of every project. How do you manage, landholders, stakeholders, native title issues, government bodies, easements, road casements, mining and petroleum tenure, compensation payments and new infrastructure in the one system? How do you also ensure that the system has the capabilities to keep the project on time, management informed and not cost a fortune?

Ask someone who has experienced the same challenges.

At Mipela, we have over twelve years of experience working on pipeline and infrastructure projects. We understand what you are trying to achieve and the process that must be followed to succeed. This knowledge has enabled us to develop a software solution that allows you to incorporate all relevant information in the one system.

Introducing X-Info Connect.

Mipela have provided Origin Energy with a stakeholder management system that

www.mipela.com.au

meets their unique requirements. Intuitive, easy to use, and simple to maintain, X-Info Connect has all of the functionality you would expect from such a system. But it is the little things that make the difference.

- > **Milestone Management.** The creation of custom workflows for your project.
- > **Spatial Linking.** The capacity to view your data spatially on a map and the ability to 'mark up' and then print the map.
- > **Offline Database.** Staff in the field can use the database in 'offline' mode to avoid double handling back in the office.
- > **Custom Fields.** Customise the database with your own unique fields as required.

If you are looking for a software package that has been built by people who understand your challenges, contact Mipela.
